

Integrated Electric Vehicle and Charging Station Solutions

Vision Fleet combines electric vehicles, charging infrastructure, and operating expenses in a simple, service-based solution for fleets that is efficient, cost effective, and low risk.

Transitioning to electric and plug-in hybrid vehicles is complicated and entails potentially costly risks: ensuring EVs are deployed into appropriate uses; planning and installing charging infrastructure; monetizing tax credits; educating drivers; and dealing with vehicle resale.

Vision Fleet handles the risk and complexity, delivering your EV program quickly, efficiently, and effectively. You meet your EV-related goals, save time, and remain free to focus on broader fleet operations.

Our performance-based contract approach provides for little or no startup costs and predictable monthly payments that cover all aspects of EV deployment – vehicles, charging infrastructure, telematics, car-sharing platforms, fuel and electricity, and maintenance.

ABOUT VISION FLEET

Vision Fleet is a full-service enabler and accelerator of plug-in vehicle adoption for America's vehicle fleets. Our mission is to make it simpler and more affordable for organizations to deploy electric and plug-in hybrid electric vehicles while maintaining or improving their fleets' operational performance.
