

Electric Vehicle Adoption with Guaranteed Economics

Vision Fleet offers pre-set rates that fix the long-term costs for your entire EV deployment, creating budget certainty as you transition to a cleaner fleet.

Vision Fleet optimizes your fleet's potential costs and savings from EV adoption by integrating vehicle and charging station planning and deployment in a holistic approach. Advanced telematics, analytic software, and change-management support help us guarantee long-term costs and performance.

There are no hidden fees; all program costs are incorporated into a fixed, per-mile rate that covers vehicles, charging infrastructure, car-sharing technology, fuel and electricity, and scheduled maintenance.

In most cases, our per-mile rates will be cheaper than if you deployed EVs and charging stations on your own, and are usually equal to or better than the costs for your existing gasoline vehicles.

ABOUT VISION FLEET

Vision Fleet is a full-service enabler and accelerator of plug-in vehicle adoption for America's vehicle fleets. Our mission is to make it simpler and more affordable for organizations to deploy electric and plug-in hybrid electric vehicles while maintaining or improving their fleets' operational performance.
