

Measurable Results for Electric Vehicle Fleets

Vision Fleet helps you successfully capture and demonstrate the substantial cost, efficiency, and environmental benefits that EVs can provide for your fleet.

EVs can contribute to sustainability and carbon reduction goals, as well as improved efficiency and lower costs, all while modernizing your vehicle fleet. Achieving measurable results, however, requires careful planning, commitment, and access to reliable data about vehicle and charging station use and performance.

As an integrated EV-program developer, Vision Fleet provides best-practice planning and deployment support, proprietary analytic software, and transparent reporting. We are a dedicated partner that is ultimately accountable for your program's success.

Vision Fleet's management and driver engagement platforms help maximize efficient utilization of EVs, plug-in rates on PHEVs, and overall driver satisfaction. We also allow you to do more with less through strategies like car-sharing and right-sizing that increase fleet asset utilization.

ABOUT VISION FLEET

Vision Fleet is a full-service enabler and accelerator of plug-in vehicle adoption for America's vehicle fleets. Our mission is to make it simpler and more affordable for organizations to deploy electric and plug-in hybrid electric vehicles while maintaining or improving their fleets' operational performance.
